

EXHIBIT 3

EXPERT REPORT OF MATTHEW LITTLE

SUBJECT MATTER

Assessment of the use and suitability of firearms restricted under the Protect Illinois Communities Act for lawful purposes; particularly self-defense, training, and competition.

BACKGROUND AND QUALIFICATIONS

1. I am the owner, CEO, and lead instructor of GreyBeard Actual LLC, a company that provides firearms training nationwide. I have held that position since December of 2018.
2. GreyBeard Actual LLC provides training to the public in the defensive and competitive use of pistols and carbines.
3. I developed the curriculum for GreyBeard Actual's carbine/rifle and pistol training courses based on my operational and instructional experience in the U.S. Army Special Forces and the Chicago Police Department, as well as my experience as a nationally competitive athlete in multiple action shooting sport disciplines that mimic the skills needed to use a firearm defensively. The curriculum also derives from many thousands of hours of advanced instruction I have completed in tactics, defensive firearms usage, and competition firearms skills from nationally and internationally recognized instructors.
4. GreyBeard Actual has five instructors, including myself, to teach its nine different course offerings for defensive pistol and carbine/rifle.
5. Around two hundred private citizens a year attend GreyBeard Actual's open enrollment pistol and carbine training courses. Class size is typically limited to 16 students per class, for safety reasons resulting from limits on range size and instructor attention. But for those limitations, GreyBeard Actual would easily train at least twice that number. While individual members of military and law enforcement units attend our open enrollment classes, our courses are predominantly attended by private citizens.
6. In GreyBeard Actual's pistol training courses, we require students to use a semiautomatic pistol that accepts detachable magazines. Many of these pistols have threaded barrels, mostly for the purpose of accommodating compensators—ported chambers designed to divert gases upward, which significantly improve accuracy on follow-up shots by lowering the recoil of the pistol. This effectively decreases the amount of energy felt by the shooter when the gun is fired. Every instructor and most, if not all, of the students in our pistol courses use magazines having a capacity exceeding fifteen rounds.
7. In GreyBeard Actual's carbine/rifle training courses, we require students to use a semiautomatic rifle that accepts detachable magazines. Every instructor and student uses a semiautomatic rifle with detachable magazines that has one, more, or all of the following features: a pistol grip for the firing hand, a forward grip that can be held by the non-firing (forward) hand, a stock whose length can be adjusted or that can be folded along the side of

the rifle or detached from it, a flash suppressor designed to mitigate loss of night vision by diverting exhaust gases from the shooter's field of view, and a rail or shroud around the barrel to prevent the heat of the barrel from burning the shooter's non-firing (forward) hand. Every instructor and virtually every student in our carbine/rifle courses use magazines with a capacity well in excess of ten rounds. A significant percentage of students use AR pistols, which are based on the AR-15 platform but do not have a stock and typically have shorter barrels. These typically have a flash suppressor and a rail or shroud encasing the barrel and a forward grip.

8. I have personally trained with many, if not most, nationally recognized instructors in the defensive and competitive shooting world. In my experience, those instructors have the same firearm equipment requirements for their students as GreyBeard Actual does, and the students in their classes generally utilize firearms matching what I have experienced in my own classes.
9. As part of my role as a firearm trainer, I stay abreast of developments in firearm technology by reading industry publications that virtually everyone in the firearms industry consults for knowing what the current firearm market has to offer, such as *Guns & Ammo*, *Gun Digest*, *Firearms News*, *Handguns*, *American Handgunner*, *Recoil*, and others; by attending trade shows including the SHOT and NRA shows, and frequently discussing equipment, training, and tactics with my fellow firearms instructors as well as the students in my classes. I have also worked through my company GreyBeard Actual for the firearms manufacturers Taurus USA and Staccato. This experience has educated me on what arms are available and best suited for self-defense and competition uses.

OPINIONS

10. It is my understanding that Illinois restricts as "assault weapons" any:
 - A. Semiautomatic rifles/carbines that accept detachable magazines or may be readily modified to accept detachable magazines, and that have one or more of the following features:
 - i. a pistol grip or thumbhole stock;
 - ii. a feature capable of functioning as a protruding grip that can be held by the non-trigger hand;
 - iii. a folding, telescoping, thumbhole, detachable, or an adjustable stock;
 - iv. a flash suppressor;
 - v. a shroud attached to the barrel or that partially or completely encircles the barrel, allowing the bearer to hold the firearm with the non-trigger hand without being burned, but excluding a slide that encloses the barrel.
 - B. Semiautomatic pistols that accept detachable magazines or that may be readily modified to accept detachable magazines and that have one or more of the following features:

- i. a threaded barrel;
- ii. a second pistol grip or another feature capable of functioning as a protruding grip that can be held by the non-trigger hand;
- iii. a shroud attached to the barrel or that partially or completely encircles the barrel, allowing the bearer to hold the firearm with the non-trigger hand without being burned, but excluding a slide that encloses the barrel;
- iv. a flash suppressor;
- v. the capacity to accept a detachable magazine at some location outside of the pistol grip; or
- vi. a buffer tube, arm brace, or other part that protrudes horizontally behind the pistol grip and is designed or redesigned to allow or facilitate a firearm to be fired from the shoulder.

C. Semiautomatic shotguns that have any one of the following features:

- i. a pistol grip;
- ii. a fixed magazine with the capacity of more than 5 rounds; or
- iii. the capacity to accept a detachable magazine.

11. It is my opinion that semiautomatic rifles that accept detachable magazines are commonly possessed by members of the American public for various purposes, including competitive sports, training, and lawful personal defense; particularly models having one, multiple, or all of the above listed features that would make them an “assault weapon” under Illinois law. In my opinion, AR-15 style rifles with these features are the most popular rifle in the country.
12. It is my opinion that semiautomatic pistols capable of accepting a detachable magazine that possess one, multiple, or all more of the above-listed features that would make them an “assault weapon” under Illinois law are commonly possessed by members of the American public for various purposes, including sport, training, and lawful self-defense. The most common example of such a pistol are AR-15 style semiautomatic pistols.
13. It is my opinion that individual parts—such as pistol grips; forward grips; flash suppressors; adjustable or detachable stocks; and barrel shrouds or rails—are commonly acquired and possessed by members of the American public for the purpose of customizing a firearm to the person’s particular taste or stature. For example, a person with smaller hands might not like how the manufacturer’s pistol grip on a rifle feels and buys an aftermarket replacement grip that fits better or a shorter stock, etc.

14. It is my opinion that detachable magazines for rifles that have a capacity exceeding 10 rounds and for handguns that have a capacity exceeding 15 rounds are commonly possessed by members of the American public for various purposes, including sport, training and lawful self-defense.
15. My above opinions about the commonality of rifles and handguns and their respective parts/accessories and magazines are based on my personal observation of thousands of students in my classes and other reputable instructors' training courses, the myriad products and accessories provided by the defensive firearms industry of which I am a part, as well as the many athletes I have observed using these rifles in action shooting sport competitions. In certain divisions in the action shooting sports, it is impossible to be competitive with a shotgun that does not accept detachable magazines.
16. While I do not personally provide training courses on shotguns, I have received extensive training on their use for self-defense, training, and competitive purposes. Based on that experience, it is my opinion that semiautomatic shotguns equipped with pistol grips and/or adjustable or folding stocks are in common use by the public for defensive and sporting purposes, as are shotguns accepting detachable magazines and shotguns equipped with fixed magazines that can hold more than five rounds.
17. It is my opinion that semiautomatic firearms that accept detachable magazines are so well suited for defense of self or others as to render all other types of firearms obsolete for that purpose. A semiautomatic firearm allows the user to fire at a pace appropriate to the situation, whether rapid or methodical, without any intermediary steps necessary to chamber additional rounds. This is critical when defending oneself or others against deadly force.

In order to be ideally suited for defensive use, a rifle must have a detachable magazine. The reasons for this are multiple. First is ammunition capacity. Internal magazines cannot match the ammunition capacity of detachable magazines. Having less ammunition readily available or having to take additional steps are significant disadvantages when reacting to an attack using deadly force, especially as fine motor skills deteriorate significantly under stress. Each additional step increases the chance of error. The second is reliability. When weapons jam, it is most often due to a failure to properly feed from a faulty magazine. A detachable magazine allows the user to quickly replace the most common cause of firearm malfunctions. Without a detachable magazine, clearing a malfunction can be complex enough to require tools, whereas with a detachable magazine a malfunction can be cleared in seconds. Obviously, the ability to clear a jammed firearm in seconds versus potentially minutes is helpful while defending oneself against violent attack. The ability to accept detachable magazines also allows a rifle to be stored unloaded for safety reasons yet quickly put into action by a proper user if necessary. This is not to say that other firearms don't work for self-defense; only that a rifle with a detachable magazine is better suited for self-defense in the same way that a car is better for transporting people across stateliness than a stagecoach, which could technically accomplish the task as well.

18. It is also my opinion that limiting a rifle to a ten- round capacity, a handgun to a 15-round capacity, and a shotgun to a five-round capacity handicaps the user in a self-defense situation.

All other factors being equal, more ammunition is better in a defensive incident. Obviously there is a practical upper limit on this where additional bulk and weight is disadvantageous, but this is far beyond the most common 30-round (or even 20-round) capacity magazines used with AR-15 platform rifles and that generally does not occur in magazines of up to thirty rounds for handguns or fourteen rounds for shotguns. In sporting use, limiting magazine capacity would prevent athletes from being competitive in their chosen sport due to insufficient magazine capacity relative to athletes from other states and countries. Additionally, virtually every full-sized semiautomatic handgun developed in the last decade has, and often is sold with, a magazine with a capacity in excess of fifteen rounds and virtually every semiautomatic rifle with a detachable magazine is sold with a magazine with a capacity in excess of 10 rounds. I am unaware of any modernly designed defensive shotgun that is limited to a five-round capacity magazine.

19. It is my further opinion that semiautomatic rifles capable of accepting detachable magazines that also have a pistol grip, a forward grip, a barrel shroud or rail, flash-suppressor, or adjustable, thumbhole, or folding stock are extremely well-suited for lawful personal defense, both inside or outside of the home when appropriate ammunition is used. These features often come standard from the manufacturer, or can be purchased and added aftermarket. They do not, however, mechanically affect a rifle's rate of fire, capacity to accept ammunition, or the power of the projectile a rifle discharges. The specific reasons those features facilitate self-defense and/or competitive shooting, in my opinion, are as follows:
 - A. A pistol grip or thumbhole stock utilized by the firing hand allows a carbine/rifle to be operated with proper technique, which increases not only speed of operation and accuracy, but safety as well. In a self-defense situation, each of these factors can impact success. The pistol grip/thumbhole stock also allows the shooter to easily access the manual safety on the weapon, essential to safe handling of the rifle, both for the user and to avoid endangering bystanders. All of this is significantly improved by having a carbine outfitted with a pistol grip/thumbhole stock. The pistol grip/thumbhole stock also allows the rifle to be operated with only the firing hand, in case of injury or the need to perform a vital task with the support hand, such as helping someone to a safe position or grabbing onto something for physical support (like a wall) or use something (like a phone). The pistol grip/thumbhole stock on a carbine also aids the user in retaining the weapon if an attacker attempts to disarm him or her. The ability to retain a weapon against an attempt to disarm the shooter is obviously vital in a self-defense situation.
 - B. A forward grip, like the pistol grip, contributes to using a carbine with optimum speed of operation, accuracy, and safety. The forward grip can also be used to brace the carbine against an object, significantly increasing accuracy on difficult shots. Lastly, as with a pistol grip for the firing hand, the forward grip also aids the user in retaining the weapon against an attempt to disarm him or her.
 - C. An adjustable stock or telescoping stock allows the user to adjust the length of pull on their carbine to best fit their specific stature or clothing. Length of pull, simply put, is the distance from a rifle's trigger to the shooter's shoulder. Properly adjusted stocks allowing for correct length of pull is essential for maximizing accuracy and weapons handling.

Obviously, both are helpful, if not essential, for defensive use of the rifle. This is especially true for the population groups arguably most in need of a firearm for self-defense, the disabled, the small statured, the elderly, and the frail. The same is true for detachable stocks, which allows the stock to be changed out to find one that is most comfortable for the user. A folding stock can be folded alongside the rifle for safe storage and transportation of the firearm.

- D. A flash suppressor helps reduce the shooter's loss of night vision when discharging the weapon in low-light conditions by directing the flash made when a firearm is discharged away from the user's field of vision. Loss of night vision can diminish accuracy and the ability to discern friend from foe or whether a threat remains. Flash suppressors can also act as muzzle brakes, improving controllability and accuracy of the rifle by acting to lower felt recoil. They do this by diverting the exhaust gases from the rifle to the sides, lessening the force sent directly back to the shooter. This can be a significant advantage in defensive situations.
 - E. A "barrel shroud" surrounding the barrel either partially or completely allows the shooter to hold the fore-end of the carbine without being burned by the barrel. This is a requirement for proper shooting technique. Being unable to grip the weapon properly is both unsafe and prevents the weapon from being used effectively in any application, including self-defense. Virtually every modern rifle in existence has this feature.
20. It is my further opinion that semiautomatic pistols capable of accepting detachable magazines that also have a second pistol grip, buffer tube, arm brace, flash suppressor, barrel shroud, or threaded barrel, particularly AR-15 style pistols, are well-suited for self-defense both inside and outside of the home when appropriate ammunition is used. These features often come standard from the manufacturer, or can be purchased and added aftermarket. They do not, however, mechanically affect a rifle's rate of fire, capacity to accept ammunition, or the power of the projectile a rifle discharges. The specific reasons those features facilitate self-defense and/or competitive shooting, in my opinion, are as follows:
- A. A second grip does for the same reasons such grips are helpful on rifles described above.
 - B. A buffer tube protruding from the rear of a semiautomatic AR-15 style pistol is not a self-defense feature; rather it is necessary for the pistol's operating system. This is a feature of virtually every AR-15 style pistol in existence. An arm brace does facilitate self-defense by stabilizing the weapon and allowing it to be fired effectively by the population groups most arguably most in need of a firearm for self-defense, the handicapped, the small statured, the elderly, and the frail.
 - C. A flash suppressor does for the same reasons they are helpful on rifles described above.
 - D. A "barrel shroud" does for the same reasons they are helpful on rifles described above. These are a feature of virtually every AR-15 style pistol in existence.

- E. A threaded barrel allows the pistol to accept a muzzle brake or compensator which can significantly improve accuracy on follow-up shots by redirecting propellant gases to counter recoil. Muzzle brakes, in particular, are often used in competitive shooting.
 - F. The capacity to accept a detachable magazine at some location outside of the pistol grip on a defensive pistol does not directly facilitate self-defense but is the only way an AR-style pistol can accept a detachable magazine, due to its design, and because such pistols are so well-suited for self-defense, that feature facilitates self-defense by making the AR pistol possible;
 - G. It is my further opinion that semiautomatic AR-15 style pistols capable of accepting detachable magazines with such features are well-suited for self defense both inside and outside of the home. I base my opinion on my personal training and experience as listed above and in the attached curriculum vitae. (See **Exhibit 1**).
21. It is my further opinion that semiautomatic shotguns equipped with pistol grips are well suited for defensive use both inside and outside the home, when appropriate ammunition is used, as are semiautomatic shotguns accepting detachable magazines and semiautomatic shotguns equipped with fixed magazines that can hold more than five rounds. The same reasons pistol-grips, detachable-magazines, and higher magazine capacities facilitate self-defense described above for rifles and pistols apply equally to shotguns.
22. It is my further opinion that the aforementioned firearm models, features, and feeding devices are capable of being worn, borne, or carried upon one's person, which increases their application for both self-defense and competitive shooting.
23. I base my above opinions as to the defensive suitability of these firearms on my experience as a U.S. Army Special Forces combat veteran as well as my career with the Chicago Police Department, and the many thousands of hours of firearms and tactics training I have either received or instructed. I also base my opinion on my personal education and experience, as listed above and in the attached curriculum vitae. (See **Exhibit 1**).

2018-Present Published Author of Amazon bestselling book on training, and several articles on training in major magazines.
2019-2021 Military and Law Enforcement Rep, Staccato Handguns

POLICE/SECURITY CAREER HISTORY

2016-2019 Training Coordinator, Chicago Police Department SWAT Team
2015-2016 Sergeant, Chicago Police Department SWAT Team
2013-2015 Sergeant, Chicago Police Detective Bureau Heavy Weapons Team
2013-2015 Sergeant, Detective Division Area North, Chicago Police Department
2009-2013 Sergeant, Gang Enforcement Unit, Chicago Police Department
2008 Sergeant, Gang Team, 015th District, Chicago Police Department
2007-2008 Sergeant, Area Four Gun Team, Chicago Police Department
2007 Sergeant, Burglary/Robbery Mission Team, 011th District, Chicago Police Department
2006 3rd Watch Rapid Response Sergeant, 011th District, Chicago Police Department
2006 Detective, Homicide/Gang/Sex crimes, Area One Detective Division, Chicago Police Department
2005 Gang Officer, 014th District, Chicago Police Department
2004 Instructor, Tactical Training Unit, Chicago Police Department Education and Training Division
2003 Member, Tactical Policy Committee, Chicago Police Department Education and Training Division
2002-2004 Firearms Instructor, Firearms Training Section, Chicago Police Department
2001-2002 Police Officer, Special Operations Section, Chicago Police Department
2000-2001 Tactical Officer, Public Housing Section-West, Chicago Police Department
1999-2018 Conducted protective details for a variety of private sector clients.
1999-2004 Instructor, weapons retention portion of Firearms Instructor Course, Chicago Police Department
1998-2010 Founding Member, Chicago Police Department Honor Guard/Color Guard
1998-1999 Police Officer, 014th District, Patrol Division, Chicago Police Department
1995-1996 Deputy Sheriff, Patrol Division, Orleans Parish Sheriff's Office
1994-1995 Defensive Tactics Instructor, Thibodaux Police Department SRT
1992-1995 Police Officer, Patrol Division and SRT (SWAT), Thibodaux Police Department

MILITARY CAREER HISTORY

2011-2013 Training Team Cadre, A/2/20th Special Forces Group (Army National Guard)
2009-2010 SFODA 2042, SOTF 202, U.S. Army Special Forces, Afghanistan

Matthew Little

2008-2009 SFODB, A/2/20th Special Forces Group (Army National Guard)
2004-2005 State Department Protective Security Detail, US Embassy, Basrah, Iraq
2001-2007 1st Lieutenant, Individual Ready Reserve, U.S. Army
2001 SFODA Operations Officer, A/2/20th Special Forces Group (Army National Guard)
2000 Commissioned as 2nd Lieutenant of Infantry (Army National Guard)
1992-2000 SFODA 2044 A/2/20th Special Forces Group, (Army National Guard)
1990-1992 Airborne Ranger, 1/75th Ranger Regiment, U.S. Army Special Operations

TACTICAL INSTRUCTIONAL EXPERIENCE

2017-2018 Training Coordinator, Chicago Police SWAT Team
2015-2017 Squad Firearms and Tactics Instruction, Chicago Police SWAT Team
2013-2015 Chicago Police Detective Bureau Heavy Weapons Team Instructor
2011-2013 Training Team Cadre, A/2/20th Special Forces Group
2004-2008 Firearms, CQB, Edged Weapons and Defensive Tactics Instructor, STTG
2004 Developed and Instructed Chicago Police High Risk Entry Course
2003-2007 Adjunct Instructor, Strategos International
2003-2004 Law Enforcement Coordinator, Aiki-Extensions Foundation
2003-2004 Firearms Instructor, Training Academy, Chicago Police Department
1999-2004 Instructor, weapons retention portion of Firearms Instructor Course, Chicago Police Department
1994-1995 Defensive Tactics Instructor, Thibodaux Police Department SRT

MARTIAL ARTS EXPERIENCE

2003-2013 Martial Arts Instructor, Nihon Bugei Shinjinkai
2003 Developed and instructed self-defense segment for NBC-TV's "Starting Over"
2003 Uchideshi (Resident Apprentice Instructor), Nihon Bugei Shinjinkai
2003-2010 Personal student of Kuroda Tetsuzan, Shimbukan Dojo
2003-2013 Founder and Instructor, Chicago Police Aikido Club
2002-2003 Uchideshi (Resident Apprentice Instructor), Aikido Association of America
2001 Shodan (1st Degree Black Belt) in Aikido
1998-2001 Founder and Instructor, Chicago Police Karate Club
1998-2015 Martial Arts Instructor, International Traditional Karate Association
1996-1997 Martial Arts Instructor, Foster's Shotokan Karate
1992 Sandan (3rd Degree Black Belt) in Shotokan Karate
1990 Martial Arts Instructor, University of New Orleans Karate Club
1980 Shodan (1st Degree Black Belt) in Tae-Kwon-Do
Over forty years martial arts training experience including Karate, Aikido, Tae Kwon Do, Jeet Kun Do, Aikijujutsu, Kenjutsu/Iaijutsu, Judo, Kali/Arnis, Gracie Jujutsu, Systema, Police Defensive Tactics, and Special Forces Combatives
